

Title: The Impact of Climate Change on Biodiversity

Climate change poses a significant threat to biodiversity worldwide. The Intergovernmental Panel on Climate Change (IPCC) has reported that rising temperatures and altered precipitation patterns are causing disruptions to ecosystems (Smith, 2018). This has led to shifts in species distribution, migration patterns, and the endangerment of various plant and animal species.

One of the most vulnerable ecosystems is the coral reefs. According to recent studies, the increase in sea surface temperatures has led to coral bleaching, endangering the rich marine life that depends on these ecosystems (Brown, 2019).

Bibliography Entry:

Smith, John. *Climate Change and Ecosystem Disruption*. Oxford University Press, 2018.

Brown, Sarah. *Coral Reefs in Peril: The Impact of Climate Change*. Academic Publications, 2019.

Please note that this is a simplified example. In a complete essay, you would include multiple references with in-text citations and corresponding bibliography entries, covering all the sources you have used in your work, such as books, articles, and websites, following the Oxford referencing style guidelines.
