**Essay About Education in Time of Pandemic**

The Covid19 pandemic raged across the world during 2020, affecting many areas of life. Education was one of them. Covid19 resulted in the closures of educational institutions and businesses. Schools, colleges and universities were forced to shut their doors as governments-imposed lockdowns and other measures to contain the spread of the virus. This has resulted in a huge shift towards online learning for students everywhere.

The pandemic has had a profound impact on education systems across the world. Traditional face-to-face teaching methods have been replaced by virtual classrooms, where teachers are able to deliver instruction through video conferencing software such as Zoom or Microsoft Teams. This approach is referred to as 'distance learning', since the teacher and student can be separated by considerable distances while still engaging with one another via digital technologies.

In the wake of the COVID-19 pandemic, educational systems around the world have had to adjust in order to meet the needs of students and faculty. In many places, remote learning has become a new norm, with physical school buildings closing their doors for safety reasons. The transition from traditional face-to-face instruction to virtual education has asked teachers to use different methods and technologies in order to provide quality instruction for their students. It has also presented challenges for both educators and learners alike as they try to adapt this new system.

The impact of online education during the global health crisis is far-reaching. Many students, particularly those from disadvantaged backgrounds may not have access to digital technology or the necessary internet connection. This disparity can exacerbate existing learning

gaps and create further educational inequity. It is also important to consider the psychological toll that isolation can take on students, as they are unable to physically interact with their peers and teachers in the same way as before. In conclusion, education in times of pandemic has been negatively impacted by the Covid19 outbreak.

The implementation of distance learning methods has posed challenges for both educators and learners alike. It is essential that measures be taken to ensure that all students have access to quality online instruction and resources during this trying time. Additionally, it is important to consider the psychological impacts of isolation on students and find ways to support them during this period of uncertainty. With proper care and attention given to these issues, we can move forward together into a brighter future as we continue our journey through this global health crisis.
